

3. Return to Earth

Words by Kathy and David Blackwell

We've been in outer space, meetin' an alien race,
But now we're comin' back from home afar.
We've been away to Mars, travellin' to distant stars,
But now we're comin' back home, yes we are!

Speeding through the darkness in the Milky Way, we've
Seen amazing things around our galaxy, so
Now we feel the pull from Earth and gravity, let's fly home, oh yeah!

Asteroids and satellites, we've seen them all, and
Did you know the sun is like a big red ball? so
Now we feel the pull from Earth and gravity, let's fly home, oh yeah!

Thousands of miles we've roamed,
Now we are headin' home,
Goodbye to galaxies light years away.
Into the rocket ship, time now to end our trip,
Hello to planet Earth, we're on our way.

Venus and Mercury, Neptune and Jupiter,
Saturn and Uranus, Pluto and Mars,
Planets both big and small, you bet we've seen them all,
In all the universe we're superstars!

We've been in outer space, meetin' an alien race,
But now we're comin' back home to stay.
Yes we are!
